ADDING TEXTURES

PICTURE EDIT OVERVIEW

There are a number of ways to add fun textures to your pictures on your IPHONE through the use of different APPS. The one we're going to use here is called Distressed FX. This APP will allow you to add several different textures to your pictures and will also give you an option to change the opacity, add birds and purchase additional textures if you wish.

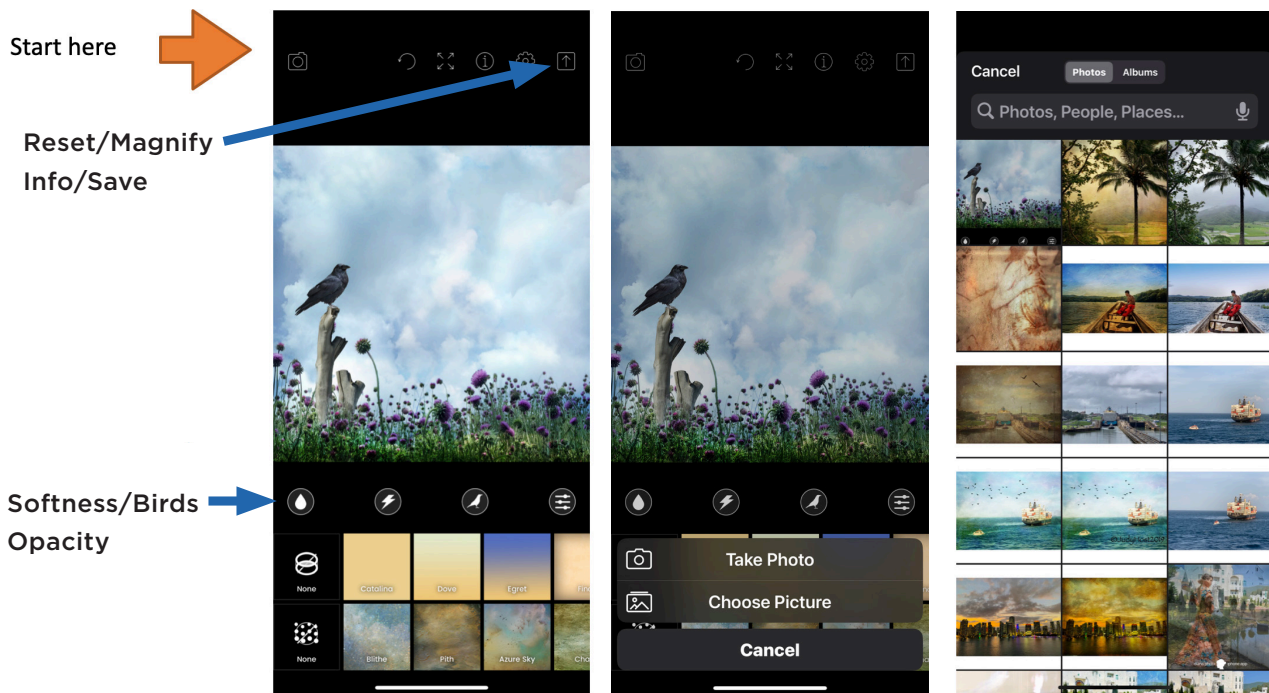

GET ORGANIZED

Before we get started though, let's get organized

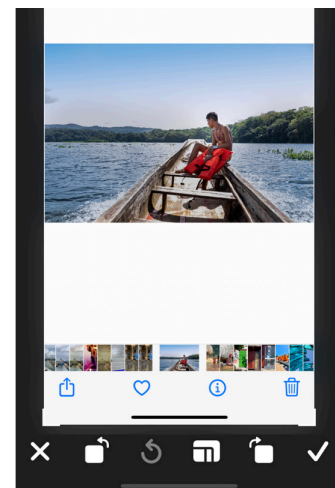

- Press and hold on the app icon
- Once you see the X's on your phone, you can move your apps around.
- If you hold and drag one app on top of another, it creates a folder that can contain multiple apps.
- You can also relabel the app folder.

OPENING THE APP AND SELECTING YOUR PICTURE

When you first open the APP, you will see a selection of textures and some symbols. To begin the process, you first select a picture from your library or you can create a new one by selecting the camera icon, (Orange arrow) A dialogue box will appear asking you to choose which function you prefer.

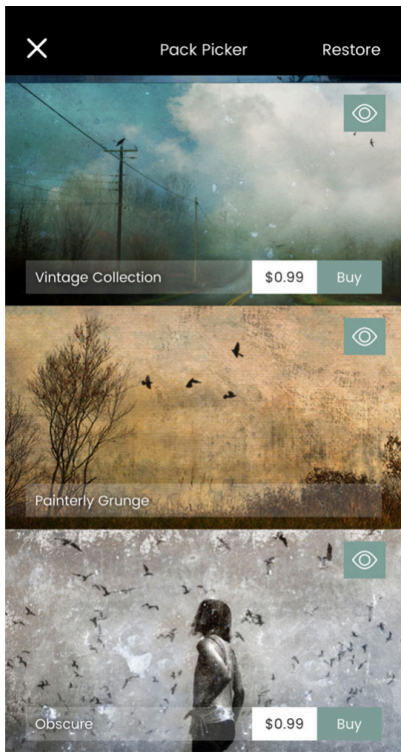

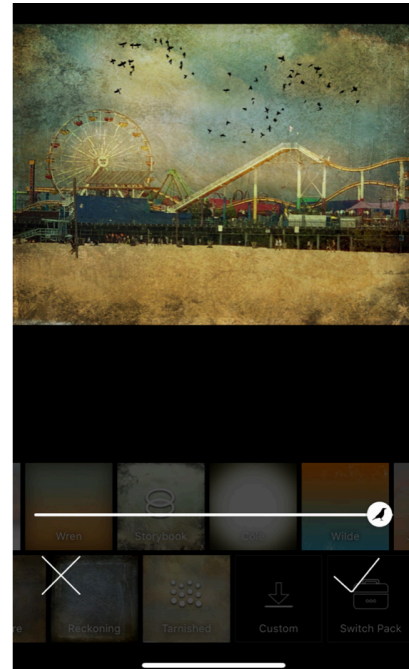

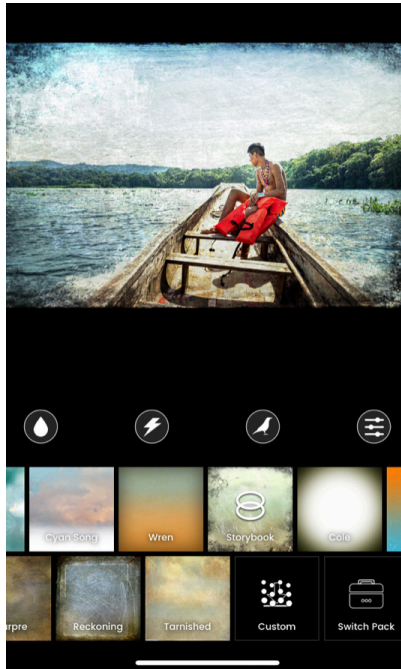

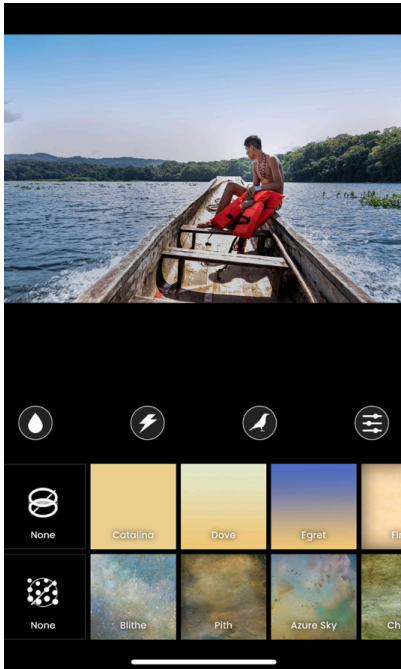

Additional functions include softening/sharpening the image, adding birds and changing the opacity of your textures. You can also select the ratio of your picture and turn it either to the left or the right. These functions will show up after you select the picture to work on. Once you are ready to start playing, select the arrow in the lower right hand corner.

PLAYING WITH THE TEXTURES

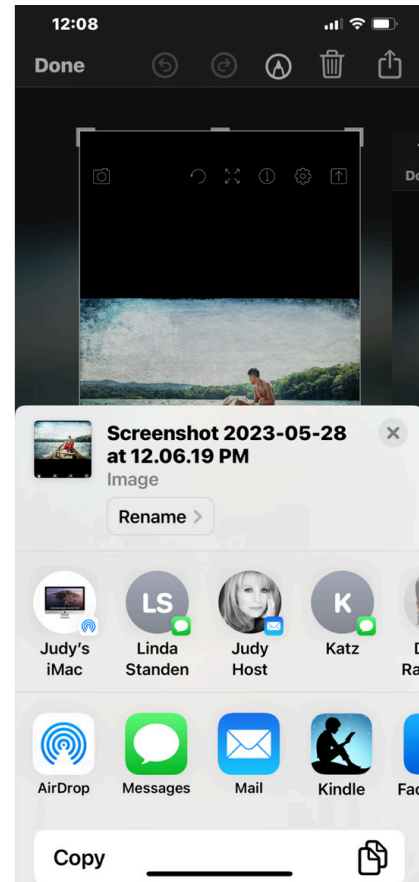

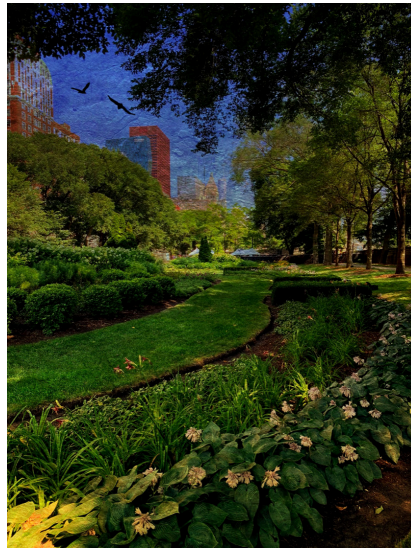

Now the fun begins. Start selecting the different textures from below. Remember you can also change the opacity of each texture, add in the birds and soften/sharpen the image.

Additional effects are available for purchase

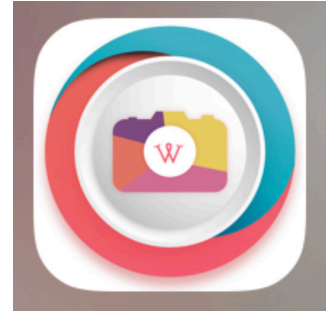

SAVING & SENDING YOUR NEW IMAGE

Once you have created your masterpiece, save it to your camera roll by selecting the **ICON** in the upper right hand corner for safe keeping. Once the picture is saved, you can paste it to Facebook, Instagram, Twitter and email by selecting the **ICON** again in the upper right hand corner.

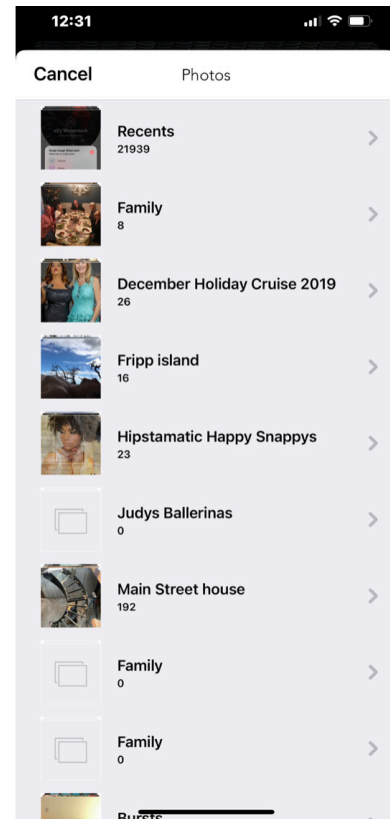

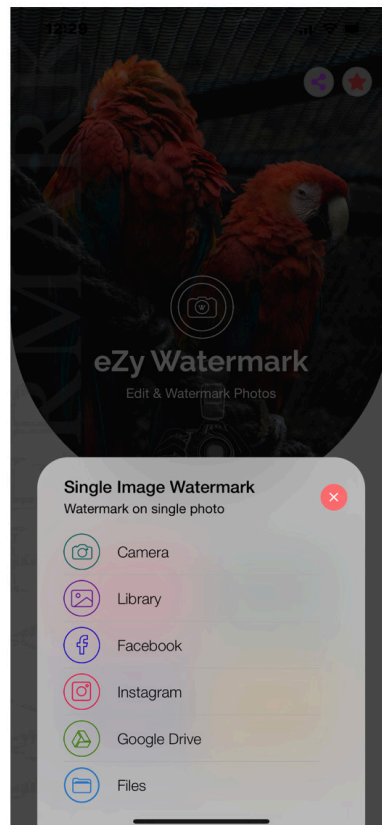

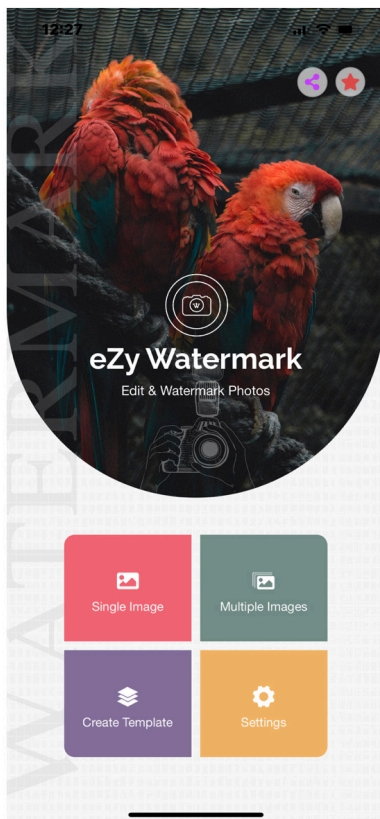

ADD A WATERMARK

eZy Watermark is another wonderful and easy way to use an IPHONE APP. This APP allows you to add your © your copyright to any of your pictures on your IPHONE. You also have the ability to change the color and the opacity of your text.

SELECTING THE PICTURE

Once you have opened the APP, select the single image option. Next, select Library or you can take a picture. If you chose Library, then go to Recents or select any album you want. Find the image you want to add your copyright to.

TYPE IN YOUR COPYRIGHT

Now that you have chosen your image, select TEXT and type in your name for the Copyright. Depending on the colors in your picture, you may need to change the color of the text and the position of where it's located. There is a color palate icon in the middle of the tool bar on the left hand side of the APP. Select the palate and chose whatever color you would like your copyright to be. Next, with your finger, you can move the text where you want it. Select the check mark and you're done. Your image will now be in Camera roll and you can send it to Social Media or Family members.
